

Introduction

The LTE Emulators emulate a number of 3GPP LTE network elements, including the Evolved NodeB (ENodeB), the Mobile Management Entity (MME), the Serving Gateway (SGW) and the PDN Gateway (PDN-GW). The Emulators are implemented according to the 3GPP Release 8 standards. The Emulators implement the network interfaces and the communication protocols required for the emulated ENodeB, MME, S-GW and PDN-GW to operate in an LTE/SAE network.

Version 4.1.0.1

Release Date: December 30, 2011

Component Versions

1. LTE Emulators : 4.1.0.1
2. LTE Emulators Console: 4.1.0.1

New in Release 4.1.0.1

1. Support for Ipv6 and Ip4v6 PDN type.
