

The SGW Functional Tester is an automated test suite for testing the correctness of an implementation of LTE Serving Gateway (SGW) according to 3GPP TS 29.274 (GTPv2C), TS 29.281 (GTPv1U), TS 23.401 and other relevant Release 9 standards.

## Version 2.0.0.18 Beta

**Release Date:** May 8, 2012

## Component Versions

---

- 1.SGW Functional Tester : 2.0.0.18
- 2.Test Executive : 2.0.0.17
- 3.SGW Functional Tester Test Procedures : 2.4

## New in this release

---

- 1.Bug Fixes.

## Test Coverage

There are total 250 test cases with E-UTRAN Attach, Detach, UE and Network Requested Bearer modification, TAU, HO, UE requested multiple PDN connectivity and Path management procedures.

## Resolved Issues

Issue #	Summary
6408	Setup file specified using -setup/-s parameter was not being used in CLI mode; instead Setup file name stored in Windows Registry was being used.

## Known Issues

Issue #	Summary
5741	Sometimes SGW FT may stop working properly if all test cases are run in a batch.
